

Haglöf Sweden Electronic Clinometer

Haglöf Sweden Electronic Clinometer – The first electronic clinometer of its kind - covers the demand for a professional instrument in height- and angle measuring work – and no fixed distance required!

- **Extremely small – yet powerful and rugged!**
- **Measure heights at any distance!**
- **Extremely low battery consumption**
- **Display featuring correct results instantly**
- **Accurate**
- **Eliminates calculating errors**
- **Easy-to-use with quick guide included with each instrument**

The New Haglöf Electronic Clinometer

features your measuring results directly in a display, processed by the instrument, eliminating any risk of calculation errors. Results will be handed to you every time as accurate and precise as you need them to be.

Low weight – less than 50 g with battery – and well balanced makes measuring easier. With the extremely low battery consumption, one battery can last the entire season.

Measure at any distance to the object: When the distance is chosen, press the key and give a simple toggling of the instrument. The correct distance is stored in your Electronic clinometer and used to calculate the correct height. To measure a height, just press the key at the root and at the top of the object - and the total height is displayed!

Technical Specifications

Weight: 50 g with battery
Size: 20 mm x 63mm x 44mm
Battery: 1 AA
Consumption: 30 mW
Height: 99,9 m
